- Must allow user to view the message from another user
- Must allow user to reply the message to another user
- System should time stamp the messages
- Should allow user to record notes about another user
- Should allow user to view notes about another user

Use case analysis narrative

Use case name	Create account
Actors	Mobile application user
Goal	Create personal account to use the application features
Preconditions	None
Main success scenario	1. The user enters an email address, which will be their user identification. 2. The user enters first and last name. 3. The user enters a phone number. 4. The user enters personal information. 5. The user enters their preferences. 6. The system validates the input information. 7. The system confirms creation of the user.
Post-conditions	User can perform other tasks in the online dating application
Extension A	6A. Email address, phone number, personal information or preference is found to be invalid or missing. 7A. System displays an error message and prompts again
Extension B	6B. System discovers that a user with the specified email already exists.

	7B.System displays an error message and does not create the user.
Comments	For simplicity we do not require any password. We also provide users with features to edit their personal information and preferences later on.
